

Seafloor Spreading Rates Lab Answers

This is likewise one of the factors by obtaining the soft documents of this **seafloor spreading rates lab answers** by online. You might not require more grow old to spend to go to the book initiation as competently as search for them. In some cases, you likewise get not discover the notice seafloor spreading rates lab answers that you are looking for. It will definitely squander the time.

However below, once you visit this web page, it will be so utterly simple to get as well as download lead seafloor spreading rates lab answers

It will not put up with many mature as we accustom before. You can reach it even though exploit something else at home and even in your workplace. fittingly easy! So, are you question? Just exercise just what we manage to pay for below as capably as review **seafloor spreading rates lab answers** what you bearing in mind to read!

The store is easily accessible via any web browser or Android device, but you'll need to create a Google Play account and register a credit card before you can download anything. Your card won't be charged, but you might find it off-putting.

Seafloor Spreading Rates Lab Answers

SEAFLOOR SPREADING LAB ANSWERS SHEET Activity 1.1: Sea Floor Spreading Exercise Part A: Name ____ The following questions should be answered with respect to the Sea-floor spreading diagram (see Figure 4 below). 1) Is the sea floor in Figure 4B at "C" older or younger than the sea floor at "W"? 2) Why are the bands at "C" (and at "W") equidistant from the mid-oceanic ridge/rift ...

Sea-Floor Spreading Answer Key. This is a mid-ocean ridge. It is an underwater mountain range that forms when magma pushes up on the crust at a divergent boundary. Seafloor spreading is happening at B. Molten rock pushes up from the asthenosphere and pushes the plates apart at the mid-ocean ridge. This creates new ocean crust.

In the example above, the rate of seafloor spreading is. Distance seafloor traveled / time it took to travel. or (1080 km / 50 Ma) = 21.6 km / Ma (It's hard to visualize 21.6 km, and even harder to imagine a time span of 1 million years. Spreading rates are more often reported in millimeters (mm) per year, a unit more easy to grasp.

Use the formula $\text{rate} = \text{distance}/\text{time}$. Convert kilometers to centimeters. For example, to calculate a rate using normal-polarity peak 5, west of the ridge: $\text{rate} = 125 \text{ km} / 10 \text{ million years} = 12,500,000 \text{ cm} / 10,000,000 \text{ years} = 1.25 \text{ cm/year}$.

Sea Floor Spreading Lab 4 3 Answers

Once you have identified the magnetic isochrons on either side of the ridge, you can use their spacing and ages to calculate the velocities of sea floor spreading. A rate of motion, also known as speed, is found by dividing the distance something has moved by the length of time it took to move that far.
