Soil Science Sustainable Production And

It places greater emphasis on sustainable production and environmental protection, and incorporates the new soil classification system. The text covers all essential areas: pedology, soil chemistry and fertility, soil physics, and land use management. Many specific examples are given from the rich heritage of New Zealand agriculture and horticulture.

Our soil science research examines organic matter content, soil carbon, nutrient cycling, physical soil properties, soil chemistry and biology. We also study the interactions between soil and plant processes.

Soil Science: Plant & Food Research

Soil science, sustainable crop production and economic development: The multifunctional services of soil science as an answer to sustainability and renewability of crop production for the economic development of Sub-Saharan Africa is considered to be determined, by the combined influences of soil properties, soil quality and soil management (Brady and Weil, 2007).

Role of Soil Science: An Answer to Sustainable Crop ...

Sustainable Food and Fiber Production through Soil Soil provides food and fibers for us to eat, and clothes to wear. The biggest challenge for soil scientists involve the sustainable production of these items.

Sustainable Plant and Soil Systems. The Sustainable Plant and Soil Systems major, with concentrations in Environmental Horticulture, Sustainable Agriculture, and Turfgrass Science, focuses on the science and practices associated with sustainable plant production and/or use within managed systems. Courses emphasize practices and concepts related to reducing environmental impact during production and in managed land use systems.
